

# RESIN MODIFIED PAVEMENT (RMP)

by [ALYAN corporation](http://www.alyancorp.com)  
[www.alyancorp.com](http://www.alyancorp.com)

A solution for Heavy Duty Pavements that take a lot of punishment such as:

- . Transportation depots and container terminals
- . Defense installations and Army tank testing tracks
- . Airport refueling areas and machinery refueling zones
- . Mine facilities
- . Loading docks, forklift areas and warehouses.
- . Busy bus zones, truck stops and parking

RMP is a tough semi-rigid surfacing process which combines the flexible characteristics of bitumen macadam with the abrasion and wear-resistant properties of polymer cement concrete.

These outstanding physical qualities, backed by more than 30 years of research and development technology, have resulted in more than 40 million square yards of RMP laid on projects worldwide.

RMP is the ideal surfacing system for heavy duty pavement construction, proven over a wide range of industrial, public, private and military applications.
